Ion Exchange plans to increase exports, set up another unit for resins

To commission assembly facility in Saudi Arabia

V RISHI KUMAR

Hyderabad, December 13

Ion Exchange (India) Ltd is working towards nearly doubling its revenue to ₹1,800 crore over the next three years, up from ₹1,000 crore achieved last fiscal.

The company, known for its water treatment, liquid waste management and environmental solutions, has taken up a backward integration project to commission a ₹50-crore membrane manufacturing unit.

It is setting up another unit to make resins at Ankleshwar and an overseas assembly unit in Saudi Arabia.

Ajay Popat, President, said: "Over the past few decades, the company has gradually consolidated its business in the area of water treatment products and solutions, its related services and facilities management for industries. Given the opportunities,

Ajay Popat, President, Ion Exchange (India) Ltd

we are seeking to increase our overseas presence. We manage water treatment for more than 1,200 industries."

"Of the nearly ₹1,000 crore revenue, about 27 per cent is from exports. Our plan is to take this up to 45-50 per cent over the next three-four years when we expect the turnover to go up to about ₹1,800 crore.

"We see this being achieved as we are also executing a major contract in Sri Lanka and expect exports to pick up with the new assembly unit in Saudi," he told *Business Line*.

Founded in 1964 as a British company, the name was later changed to Ion Exchange (India) Ltd.

The company has several manufacturing units – at Ankleshwar for resins, Goa for membranes set up with ₹50 crore outlay, an export-oriented unit near Thane, a pre-engineered products unit at Hosur near Bengaluru, Morbi in Gujarat for special binders for ceramic industry and a unit in Patancheru, Telangana.

"Apart from the new facility at Goa, where we already had an-

other plant, we are in the process of setting up an assembly plant in Saudi Arabia to cater to the Middle East region, and another plant for resins at Ankleshwar, for which permission has been received. All these would come up by next year," he said.

The company also bagged a major ₹1,200 crore order in Sri Lanka and expects to complete it over the next three years.

"With increasing acceptance of our products, we see growing presence in the overseas market. Therefore, we are looking at taking the exports up from 27 per cent to 45-50 per cent on an expanded business over three years," he said.

"The ability to manufacture membranes was the missing link in our solutions. We have managed to address this by setting up a plant in Goa, which will also cater to the export market," he said.

The company launched a specialised pure water generation product for the pharma and biotech sectors.

Ion Exchange to turn waste into energy

ENS ECONOMIC BUREAU
@Hyderabad

ION Exchange (India) Limited, one of the leading players in water treatment and liquid waste management, is focusing on solid waste management and waste-to-energy segments. Ion Exchange has invested ₹7 crore on a demonstrative waste-to-energy plant set up in Hyderabad. It has tied up with Infosys and NGO Akshaya Patra, to treat waste generated by these two organisations and convert into energy. The project and will become operational by February 2018.

"As the proportion of solid waste is also increasing on an alarming scale, we want to focus on solid waste treatment and waste-to-energy initiatives," Ajay Popat, president, Ion Exchange, told Express

here on Friday. Popat said the company's focus is to come up with solutions relevant to the Indian context in tackling waste problems, adding the firm invests heavily in R&D.

He added that the model would be not just environment-friendly but also commercially viable. "We will showcase the model to municipal bodies, industries and companies and further expand. Although initially, ₹7 crore has been invested on this project, we are open to investing more on solid waste to energy projects in the coming days," said Popat.

Ion Exchange has a revenue of about ₹1,000 crore now and as the company is growing rapidly across various segments, Popat said adding that it was aiming to take the revenue to ₹1,800 crore over the next three years.

EXECUTIVE DIGEST

Ion Exchange launches 'INDION SWIFT 5Gx'

Hyderabad: Mumbai-based Ion Exchange (India) Limited on Friday announced the launch of a new product, 'INDION SWIFT 5Gx,' that would cater to the needs of the pharmaceutical industry. It uses a short-cycle regeneration method and takes up to 35 minutes to regenerate as compared to other available conventional products that take an average 8

hours for a single regeneration cycle. ^{TNN}
Ola launches in-trip insurance program: Cab aggregator Ola on Friday announced the launch of a comprehensive in-trip insurance program, customised for its driver partners across India. Launched in partnership with Bajaj Allianz, 'Chalo Befikar' Insurance will be provided to all active driver partners on the Ola platform offering a cover of up to Rs 5 lakh. Unlike traditional life insurance programs, this comprehensive scheme provides daily benefits in case of hospitalization that cover business losses, apart from taking care of outstanding car loans and children's education. ^{TNN}

Ion's product for pharma

Hyderabad: Ion Exchange (India) Limited on Friday launched Indion Swift 5Gx, a high purity water generation product catering to the special needs of the pharmaceutical industry. The product has been designed in consultation with pharmaceutical engineers and end users for maximum performance. This launch marks the company's expansion of its product line for the sector within its 'Indion' purified water systems range. "The new product offers state-of-the-art technology for producing high purity water consistently for the pharmaceutical and biotechnology sectors. The performance driven product is cost-effective, modular, energy efficient and has a very short regeneration time of only 35 minutes. This is sure to improve overall productivity for varied pharmaceutical processes," said Ajay Popat, President, Ion Exchange (India) Limited.

Sewage treatment solutions provider Ion Exchange bets big on Namami Gange

By Ashish Kulshrestha, ET Bureau | Dec 15, 2017, 06:18 PM IST

0 Comments

India expects to add nearly 500-600 STPs across the country over the next two years.

Water treatment solutions provider Ion Exchange [BSE 1.95%](#) is looking to tap the centre and state government's focus on sewage treatment around River Ganga and few metro cities and expects it to be a major driver for business.

While the Namami Gange project aims to set up sewage treatment plants (STP) under public-private partnership (PPP) model in five states of Uttarakhand, Uttar Pradesh, Bihar, Jharkhand and West Bengal from where the river flows to control the discharge of sewage

in the river, state governments of Maharashtra, Chennai and Bengaluru among others are also looking to set up STPs.

Ajay Popat, president, Ion Exchange, said, "The Company is closely following the Namami Gange program where nearly 300 STPs would come up in the five states it flows through and another six in Mumbai, tender for which would be out next year. We are also looking at cities like Bengaluru and Chennai."

As per a study by the Central Pollution Control Board (CPCB) in 2015, India generated a total of approximately 62,000 million litres per day (MLD) of sewage as against a treatment capacity of approximately 23,000 MLD, a gap of 63%, opening up huge opportunities for

companies like Ion Exchange as this untreated water is discharged in local water bodies thereby causing large-scale water and ground contamination.

India expects to add nearly 500-600 STPs across the country over the next two years.

"While the country has nearly 800 STPs currently, it requires a minimum of 2,000 STPs to handle the sewage," said Popat.

He was speaking at the launch of INDION, a high purity water purifier for the pharma industry in Hyderabad on Friday. The latest product provides high purity and consistent quality of water in a shorter span of time for companies.

Recommended By Colombia

Meanwhile, the company plans to invest Rs 40-50 crore in expanding its resin production capacity, an insoluble substance used in water purification, in Kutch.

Popat said, the industry size for water treatment for pharma units is nearly Rs 400-500 crore where the company is having a market share of over 15%. The company has previously set up two large STPs of 117 million litres per day (MLD) and a 30 MLD for converting sewage water into usable water.

Ion Exchange plans to increase exports, set up another unit for resins

To commission assembly facility in Saudi Arabia

Ajay Popat, President, Ion Exchange (India) Ltd

Hyderabad, December 15:

Ion Exchange (India) Ltd is working towards nearly doubling its revenue to Rs. 1,800 crore over the next three years, up from Rs. 1,000 crore achieved last fiscal.

The company, known for its water treatment, liquid waste management and environmental solutions, has taken up a backward integration project to commission a Rs. 50-crore membrane manufacturing unit.

It is setting up another unit to make resins at Ankleshwar and an overseas assembly unit in Saudi Arabia.

Ajay Popat, President, said: "Over the past few decades, the company has gradually consolidated its business in the area of water treatment products and solutions, its related services and facilities management for industries. Given the opportunities, we are seeking to increase our overseas presence. We manage water treatment for more than 1,200 industries."

"Of the nearly Rs. 1,000 crore revenue, about 27 per cent is from exports. Our plan is to take this up to 45-50 per cent over the next three-four years when we expect the turnover to go up to about Rs. 1,800 crore.

"We see this being achieved as we are also executing a major contract in Sri Lanka and expect exports to pick up with the new assembly unit in Saudi," he told *Business Line*.

Founded in 1964 as a British company, the name was later changed to Ion Exchange (India) Ltd.

The company has several manufacturing units — at Ankleshwar for resins, Goa for membranes set up with Rs. 50 crore outlay, an export-oriented unit near Thane, a pre-engineered products unit at Hosur near Bengaluru, Morbi in Gujarat for special binders for ceramic industry and a unit in Patancheru, Telangana.

“Apart from the new facility at Goa, where we already had another plant, we are in the process of setting up an assembly plant in Saudi Arabia to cater to the Middle East region, and another plant for resins at Ankleshwar, for which permission has been received. All these would come up by next year,” he said.

The company also bagged a major Rs. 1,200 crore order in Sri Lanka and expects to complete it over the next three years.

“With increasing acceptance of our products, we see growing presence in the overseas market. Therefore, we are looking at taking the exports up from 27 per cent to 45-50 per cent on an expanded business over three years,” he said.

“The ability to manufacture membranes was the missing link in our solutions. We have managed to address this by setting up a plant in Goa, which will also cater to the export market,” he said.

The company launched a specialised pure water generation product for the pharma and biotech sectors.

Ion Exchange launches high purity water generation product for pharma industry

Industry leader in water treatment, liquid waste management and environment solutions, Ion Exchange (India) Limited recently announced the launch of Indion Swift 5Gx—a high purity water generation product catering to the special needs of the pharmaceutical industry.

The product has been designed in consultation with pharmaceutical engineers and end users for maximum performance. This launch marks the company's expansion of its product line for the sector within its 'Indion' purified water systems range.

Indion Swift 5Gx improves efficiency and purity by introducing a new and unique technology which uses 'Uniform Particle Size' resins instead of the conventional resins otherwise used in water treatment and purification. The new product uses a short-cycle regeneration method and takes up to 35 minutes only in order to regenerate as compared to other available conventional products which have an average time of 8 hours for a single regeneration cycle. The product is a first of its kind for the pharmaceutical sector and with validation package.

Launching the product, Ajay Popat, president, Ion Exchange (India) Limited said, "Water is a primary ingredient for pharmaceutical preparations and high purity is an essential factor. Being pioneers in water treatment, Ion Exchange (India) has always invested in R&D to introduce some of the most innovative and technically advanced products and services to meet the needs of the pharma industry's stringent and critical requirements.

While we have a complete range of high purity water generation and demineralisation products, Indion Swift 5Gx offers state-of-the-art technology for producing high purity water consistently for the pharmaceutical and biotechnology sectors. The performance driven product is cost effective, modular, energy efficient and has a very short regeneration time of only 35 minutes. This is sure to improve overall productivity for varied pharmaceutical processes."

Indion Swift 5Gx is fully automatic and has minimum bacteria build-up due to its short cycle. The product is also entirely compliant with latest USP & Eur. specifications and with GAMP & ISPE design standards. The Indion range by Ion Exchange is known for complete pure water generation package and is pre-validated to industry accepted standards.

Ion Exchange has been a preferred and trusted partner to the pharma sector for water treatment and purification across the world. In addition to high purity water solutions for the pharma and biotech sectors, Ion Exchange is also a specialist in ion exchange resins used for water applications and non-water applications i.e. excipients in pharmaceutical formulations, and polymeric adsorbents.

Ion Exchange launches 'INDION SWIFT 5 Gx' for Pharma Industry

Ion Exchange (India) Limited, a premier company in water, liquid waste management and environment solutions, has launched "INDION SWIFT 5Gx "a high purity water generation" product catering to the special needs of the pharmaceutical industry, here on Friday.

The product has been designed in consultation with pharmaceutical engineers and end users for maximum performance, the company said in a release. This launch marks the company's expansion of its product line for the sector within its 'INDION' purified water systems range.

INDION SWIFT 5Gx improves efficiency and purity by introducing a new and unique technology which uses 'Uniform Particle Size' resins instead of the conventional resins otherwise used in water treatment and purification. The new product uses a short-cycle regeneration method and takes up to 35 minutes only in order to regenerate as compared to other available conventional products which have an average time of 8 hours for a single regeneration cycle. The product is a first of its kind for the pharmaceutical sector and with validation package, the company claimed.

Launching the product, Ion Exchange (India) Limited President Mr. Ajay Popat said, we have a complete range of high purity water generation and demineralisation products, INDION SWIFT 5Gx offers state-of-the-art technology for producing high purity water consistently for the pharmaceutical and biotechnology sectors. The performance driven product is cost effective, modular, energy efficient and has a very short regeneration time of only 35 minutes. This is sure to improve overall productivity for varied pharmaceutical processes, he added.

Ion Exchange (India) Limited launches High Purity Water Generation product for Pharma industry

Hyderabad, India, December 15, 2017: Industry leaders in water treatment, liquid waste management and environment solutions, Ion Exchange (India) Limited today announces the launch of INDION SWIFT 5Gx—high purity water generation product catering to the special needs of the pharmaceutical industry. The product has been designed in consultation with pharmaceutical engineers and end users for maximum performance. This launch marks the company’s expansion of its product line for the sector within its ‘INDION’ purified water systems range. INDION SWIFT 5Gx improves efficiency and purity by introducing a new and unique technology which uses ‘Uniform Particle Size’ resins instead of the conventional resins otherwise used in water treatment and purification. The new product uses a short-cycle regeneration method and takes up to 35 minutes only in order to regenerate as compared to other available conventional products which have an average time of 8 hours for a single regeneration cycle. The product is a first of its kind for the pharmaceutical sector and with validation package.

Launching the product, Mr. Ajay Papat, President, Ion Exchange (India) Limited said, “Water is a primary ingredient for pharmaceutical preparations and high purity is an essential factor. Being pioneers in water treatment, Ion Exchange (India) has always invested in R&D to introduce some of the most innovative and technically advanced products and services to meet the needs of the pharma industry’s stringent and critical requirements. While we have a complete range of high purity water generation and demineralisation products, INDION SWIFT 5Gx offers state-of-the-art technology for producing high purity water consistently for the pharmaceutical and biotechnology sectors. The performance driven product is cost effective, modular, energy efficient and has a very short regeneration time of only 35 minutes. This is sure to improve overall productivity for varied pharmaceutical processes.”

INDION SWIFT 5Gx is fully automatic and has minimum bacteria build-up due to its short cycle. The product is also entirely compliant with latest USP & Eur. specifications and with GAMP & ISPE design standards. The INDION range by Ion Exchange is known for complete pure water generation package and is pre-validated to industry accepted standards. Ion Exchange has been a preferred and trusted partner to the pharma sector for water treatment and purification across the world. In addition to high purity water solutions for the pharma and biotech sectors, Ion Exchange is also a specialist in ion exchange resins used for water applications and non-water applications i.e. excipients in pharmaceutical formulations, and polymeric adsorbents. It also offers a complete range of reverse osmosis membranes from its state-of-the-art integrated manufacturing facility in Goa. Other areas of specialization are Zero Liquid Discharge Systems, Raw Water Treatment Systems, Waste Water Treatment and Recycle Systems, and Sewage Treatment Plants. Additionally, it offers ASTOM, Japan’s wide range of Electro Deionisation Reversal/Diffusion Dialysis Membrane & Systems for Separation, Purification applications.

About Ion Exchange (India) Limited

A pioneer of water treatment in India with a legacy spanning over five decades, Ion Exchange (India) Limited is recognised internationally as a premier company in water and environment management. Ion Exchange is among the largest environment solutions providers, one of very few companies worldwide with a complete range of technologies, products and comprehensive 24/7 service support. This enables the company to offer total solutions for every sector of society – industries, homes & communities.

With sales, production and service footprints across the globe, Ion Exchange serves its markets with a sustained focus on customer satisfaction, technological innovation and dedicated service. Their capability to deliver comprehensive solutions with complete technical support makes them a partner to depend on.

Specialists in water and waste water, Ion Exchange offers total water and environment management solutions for all sectors - infrastructure, industry, institutions, municipal, homes and communities, urban and rural.

360° environment management adds value across the entire circuit - from influent water through potable and industrial process water to effluent/sewage treatment and water recycle for zero discharge and waste to energy projects for solid waste management.

Manufacturer of world class ion exchange resins for water and non-water speciality applications, membranes, water treatment chemicals and speciality process chemicals, in ISO 9001, 14001 and OHSAS 18001 certified facilities.

Design and supply of water, process liquid, waste water treatment, water recycle plants - packaged, pre-engineered and custom-built, on turnkey, BOT and EPC basis.
